# Algeria onward energy

What is energy in Algeria?

Energy in Algeria refers to energy and electricity production,consumption,and import in Algeria. The country had a primary energy use of 462 TWh in 2009with a consumption of 13 TWh per million persons. Algeria is an OPEC country.

Why is Algeria a good country for energy exports?

Algeria's geographical position near Europeprovides an advantage for energy exports,particularly to Mediterranean countries. Aligning with global sustainability goals,the Algerian Ministry of Energy and Mines has set targets for electricity generation,aiming for 40% from renewable sources by 2030.

How does Algeria's energy policy affect the environment?

Consequently,the effects of the current production and consumption patterns of energy in the country on the environment are dire,especially in the long run. Despite Algeria's significant renewable energy potential,the adoption rate and overall proportion of renewable energy in the country's energy mix are shallow (IEA 2019 ).

Is Algeria's solar power underutilized?

Algeria's vast solar potential is underutilized,with most energy consumers relying on the highly subsidized energy produced from fossil sources,as shown in Fig. 1. Across all its significant sectors (transport,industry,and households),the over-reliance on fossil-based energy leads to increased carbon emissions.

What drives energy transformation in Algeria?

A primary social driver for the energy transformation in Algeria was identified as the extent of international pressure through international climate agreements.

Can Algeria play a role in the supply of green electricity?

An expert affirmed: "Thanks to its geographical location and strategic position in the energy sector, all the conditions are met for Algeria to play a crucial role in the future in the supply of green electricity, following the Tarns-Mediterranean Plan.
