The project, a joint venture between Belarus and Rosatom, focuses on creating a factory capable of handling the entire production cycle of lithium cells. This includes manufacturing electrolytes, plates, packaging, and industrial energy storage devices, as well as traction batteries.

And in addition to better storage for solar power, higher efficiency also comes with a faster rate of charge for lithium-ion batteries. They can handle a higher amperage from the charger, which means that they can be refilled much faster than lead-acid batteries.
