Bolivia fuji energy

What is Bolivia's energy mix?
Bolivia's overall energy mix is dominated by fossil fuels,with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021,Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

What type of energy system does Bolivia use?
Similar to the country's total energy system,the power sector relies heavily on natural gas(AEtN,2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

What percentage of Bolivia's electricity comes from fossil fuels?
However,as of 2020,nearly two-thirds of Bolivia's electricity was still being generated from fossil fuels (65%),with an additional 29.3% coming from hydro (down from 31.7% in 2019),2.5% from solar (up from 1.9%),0.6% from wind,and 2.6% from other renewable sources.

Should Bolivia use solar energy to generate synthetic fuels?
Using Bolivia's own excellent solar resources to generate synthetic fuels in BPS-1 and BPS-2 would result in energy independence and security. Due to the lack of GHG emission costs in BPS-3 fuel costs remain for the fossil fuels used in the heat and transport sectors. Fig. 23.

Which sector consumes the most energy in Bolivia?
When expressed by sectors,the transport sectoris the main energy consumer in Bolivia with a share of 49.0%,followed by industry 25.3%,residential 17.3%,commerce and services 3.8% . total 3318.8 MW installed capacity.

How will Bolivia's energy transition affect fuel imports?
Increase in CAPEX suggests that during the transition,fuel imports will reduce,particularly those for fossil oil. Using Bolivia's own excellent solar resources to generate synthetic fuels in BPS-1 and BPS-2 would result in energy independence and security.
