Should a LiFePO4 battery be fully charged before storage?
It is not necessaryto fully charge a LiFePO4 battery before storage,as storing a battery at 100% charge for an extended period can harm the battery's long-term health. Charging the battery to 50% capacity before storage is recommended. 3.How Long Will a LiFePO4 Battery Last in Storage?

Should LiFePO4 batteries be kept at freezing temperature?
Therefore,keeping LiFePO4 batteries at freezing temperature is good for long-term battery storage health. However,the battery self-degradation rate should be considered. It is best to charge the battery to 40% to 50% of its capacity to keep it in optimal condition under these circumstances.

How do I protect my LiFePO4 batteries?
It is critical to keep lithium batteries away from sources of heat,radiators,or other heat sources. Chemicals inside these batteries can overheat and explode when exposed to high temperatures for long periods. We really recommend you using a battery boxto provide your LiFePO4 batteries a solid protection.
