Guyana electrawise energy

How will a gas to power project impact Guyana?
The gas to power project will have significant transformational benefitsfor Guyana: The gas to power project is expected to support diversification and a competitive economy. Investment in gas to power generation to lower electricity prices could foster development in new industries and sectors.

What type of electricity is used in Guyana?
The electricity sector in Guyana is dominated by Guyana Power and Light (GPL),the state-owned vertically integrated utility. Although most of Guyana's electricity comes from thermoelectric diesel-engine driven generators(226 MW of installed capacity),the country has a large potential for hydroelectric and bagasse-fueled power generation.

What is Guyana Power & Light?
Combined cycle turbines, multiple fuel consumption (including rich and lean natural gas, natural gas liquids and diesel) Power Plant to generate up to 300 MW of power with net 250 MW delivered to the Guyana Power & Light grid at a substation located on the East Bank of the Demerara River.

Which recommendations are applicable for Guyana's gas to power project?
The following recommendations are therefore applicable for Guyana's gas to power project. Adequate grid infrastructure,policy,and legislative changesare required to ensure that all Guyanese benefit entirely from the gas to power project.

Who owns the electricity industry in Guyana?
The electricity industry is operated by the state-owned electricity company,Guyana Light and Power Inc.(GPL),with an installed operating capacity of 337 MW in 2020 .

Could a gas-to-power project improve Guyana's Electricity Reliability?
Guyana's plan to improve the reliability of its electricity and lower the cost of electricity through a gas-to-power project could be a critical pillarthat ensures that the benefits of natural resource exploitation are broad-based this time around. The gas-to-power project has two phases:

Guyana: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Use energy efficient appliances - Replace old appliances like refrigerators, washers, etc. with new ENERGY STAR models. Enable smart power settings - Use energy saving modes on computers, TVs and other electronics. Switch to LED bulbs - LED lights use up to 90% less power than traditional incandescent bulbs.
