The highest peak of energy consumption during summer in New Providence is 250 MW and in winter goes down to 160-170 MW. Having an additional capacity of up to 34 MW is significant for our operation and will allow us to deliver a better service to our customers and to the millions of tourists who visit us every year.

The system includes 500 kW of solar PV and a mini grid control system including high power MPPT"s, station control and monitoring. The system will use energy storage to reduce diesel system operation overnight and maximise the renewable operation in the daytime The system is due to be commissioned in the first quarter of calendar year 2014.
