The obvious and most common recommendation for outer island power is the solar photovoltaic (PV) panel. This is actually not a bad idea; the PV panel itself has no moving parts, and the latest amorphous cells can produce usable electricity even on cloudy days.

Within its battery system, it includes crystalline silicon solar panels in multi or monocrystalline cell technology, solar inverters, battery power bank with battery rack and wires, solar mounting system, monitoring features, BOS components, system safety labels, installation manual, and electrical & mechanical drawings.

AIMS Power inverters are available up to 12000 watts throughout Micronesia in 12, 24 & 48 volt models for off-grid, mobile & emergency backup power applications. FREE SHIPPING (some products excluded)
