Mobile energy inc Togo

What kind of energy does Togo use?
Togo relies on biomass energy71% (firewood,charcoal,vegetable waste etc.),petroleum products (26%),and electricity (3%) (African Development Bank Group 2015).

Does Togo have a competitive electricity market?
The electricity company of Togo remains the sole entity that can market the electricity generated and there is no competitionin electricity markets that will create more competitive markets and reduce the price per unit.

What is the rate of access to electricity in Togo?
The rate of access to electricity in Togo is increasing (from 17% in 2000 to 45%in 2018),but with large differences between urban (access rate = 88.8%) and rural areas (access rate = 8%) (Energypedia 2020). Total electricity production in 2018 was 385.62 GWh between the Electricity Company of Togo (CEET) and Contour Global Togo (CGT) as shown in

Can solar PV and hydropower improve the energy situation in Togo?
With a three rounds Delphi method,the study captured the view of key stakeholders on the subject matter. It has been concluded that increasing the share of RE,namely solar PV and hydropower,could significantly improve the energy situation in Togo. This could be through the installation and development of small-scale solar plants and hydropower.

What will be a new power plant in Togo?
Another addition will be the planned coal-fired thermal power plant,the international and regional connection program with 2 transmission lines of 330 KV and 4 transmission lines of 161 KV,the construction of a 10 MW solar plant in Mango,and 5 MW in Kara (Togo PND 2018).

How does energy consumption affect the economy in Togo?
Besides,its excessive consumption may sometimes lead to massive environmental pollutionwhich takes a negative toll on the economy as illustrated by Qudrat-Ullah and Nevo (2021). Presently,the main source of energy in Togo is electricity.

mobile money on multidimensional energy poverty (MEPI) in Burkina Faso and Togo. MEPI was calculated using the method of Alkire and Foster in 2011, and a linear regression based on the ...

This study presented the view of key stakeholders in relation to renewable energy development (mainly solar and hydropower) in the energy mix of Togo, highlighting the current energy situation and actions planned for the ...

This article aims to analyse the effect of mobile money on energy poverty in Burkina Faso and Togo using a

multidimensional measure of energy. The study covers a Sahelian country and a coastal country, i.e. Burkina Faso and Togo, respectively.

Description: This paper proposes a sustainable energy utilization model which can be used to cause a paradigm shift in the refocusing of the strategies used in planning future energy policies in Togo. We discuss how, properly harnessed energy resources could lay a strong foundation for sustainable social economic development.

Togo. News Centre. Issue 511 - 14 August 2024 Amea starts Uganda PV plant construction, signs Togo PV-storage plant expansion . Uganda, Togo. Power. In depth. Issue 498 - 16 January 2024 ... The African Energy Atlas is the essential reference book for all energy... View report. Live Data.

This study presented the view of key stakeholders in relation to renewable energy development (mainly solar and hydropower) in the energy mix of Togo, highlighting the current energy situation and actions planned for the development to increase energy access in Togo.

Demand for electricity in Togo has increased rapidly in line with economic growth, but energy production capacity remains insufficient to trigger structural transformation and private sector development. The progress made and the favourable outlook should help to achieve universal access to electricity, which the authorities have set for 2030.

The rate of access to electricity in Togo is in progression (from 17% in 2000 to 35% in 2016) but with huge disparities between urban areas (access rate = 87%) and rural (access rate = 7%). Renewable energies (solar, wind, etc.) are present in the ...

mobile money on multidimensional energy poverty (MEPI) in Burkina Faso and Togo. MEPI was calculated using the method of Alkire and Foster in 2011, and a linear regression based on the instrumental variable strategy was applied to control for endogeneity bias arising from the dual causality between energy poverty and mobile money.
