The market for battery energy storage is estimated to grow to $10.84bn in 2026. The fall in battery technology prices and the increasing need for grid stability are just two reasons GlobalData have predicted for this growth, with the integration of renewable power holding significant sway over the power market.

This is largely due to its piecemeal approach to the Consumer Owned Renewable Energy (CORE) programme, which allows domestic producers without power storage batteries to feed their surplus solar energy into the grid during the day and take from it at night. Officials at CUC deny that they are opposed to "rooftop solar", as the domestic ...
