Sunsolar energy Nepal

How much does solar energy cost in Nepal?
According to a report by The Himalayan Times,the solar resource in Nepal is good enough for the production of electricity at a cost of NRs 4,800 (US$40) per MWhonce the solar industry becomes mature in Nepal,falling to below NRs 3,600 (US$30)/MWh in 2030. In average the global solar radiation varies from 3.6-6.2 kWh/m2 day in Nepal.

How to promote solar energy in Nepal?
The first and most reasonable approach for promoting solar in Nepal is to increase the domestic energy generation. In Nepal,we do not have significant sources of petroleum which is dominating the proportion of modern energy usage in the country.

Does Nepal have a solar power plan?
Although the Nepal Electricity Authority (NEA) has officially been able to buy solar power under long-term PPAs since July 2014,the majority of projects granted these contracts have been large-scale hydropower plants. Following slow activity,plans are finally afoot,however,to boost the country's solar footprint.

How many days a year does the sun shine in Nepal?
In a year,for about 300 days,sun shines. The number of sunshine hours amounts almost 2100 hours per year and average insolation intensity about 4.7 kWhm-2 day-1 (=16.92 MJ/m2 day) which makes Nepal's geographical location a favorable insolation zone for harnessing solar energy .

Does Nepal have a higher electricity demand than India?
Though the installed electricity generation capacity of Nepal has grown steadily,peak demand has also increased at a higher rateand as per the data for 2016,energy imports from India doubled for an average annual growth rate of 20.4%,compared with a 0.3% annual increase in Nepal Electricity Authority (NEA) generation.

Does Nepal have a power shortage?
Until 2016,Nepal suffered from chronic power shortages. At that time,just 65% of the country's population had access to electricity. Assessing the situation,the International Renewable Energy Agency (IRENA) estimated that the country has the potential for 2.1 GW of installed PV capacity.

On Grid: This type of installment consists of solar panels, inverter and an energy meter. It allows the client to feed the excess energy back into the grid. Off Grid: This type of 6.6 kilowatt solar installment comprises solar panels, inverter and a battery to store the excess energy. It is a perfect solution especially for people staying in remote areas.
