World Sao Tome Prn Biomass potential: net primary production Indicators of renewable resource potential Sao Tome Prn 0% 20% 40% 60% 80% 100% area <260 560260 -420670560820-670 -820 -1060 >1060 Wind power density at 100m height (W/m2)

Should so Tomé e Principe improve its port and airport facilities?
If São Tomé e Principe is to base its long term growth strategy on development and diversification of exports,it will be essential to improve its port and airport facilities. The existing sea port,which is located within São Tomé city,is antiquated,inefficient and inappropriate for the needs of modern maritime transport.

What is the wind speed of so Tomé?
The wind speed data displayed by the INM is between 2.5 and 6.3 m/s. The wind speed data presented by the Global Wind Atlas for São Tomé (Figure 40) and for ARP (Figure 41) are between 3 and 5 m/s.Both show that the development of wind energy has relatively low potential.

How much energy does Emae use in so Tomé Island?
In 2017,the maximum daily demand served by EMAE in São Tomé Island was around 20 MW(Ricardo Energy &Environment,2018). The peak consumption reaches its maximum value between 5:30 p.m. and 11:00 p.m.,as shown in Figure 24,that shows the hourly load curve.

How much MV does so Tomé have?
The island of São Tomé is composed of two levels of MV; the 6 kV underground in the capital area and aerial in the southern peripheral area of the capital,and the 30 kVthat covers most of the island. In the island of Príncipe the entire MV grid is 6 kV,one part being aerial and the other underground.

São Tome and Principe was a Portuguese colony for over 500 years, but after independence and until then, it has been going through an unprecedented energy crisis with no end in sight, which has not allowed its development.
